PART I

Executive Summary

Business Vision & Functional Outcomes

1. Executive Summary & Product Vision

The definitive north star for all design, engineering and product decisions.

1.1 Business Identity

Unity Consult is architected as a premium digital business ecosystem — not merely a service company website. The platform integrates business consultation, technology services, legal registration support, branding services, and full-spectrum digital marketing into one highly organized, commercially optimized SaaS environment. Every pixel, interaction, and data flow must reinforce four core brand pillars:

Trusted Technology Company	Enterprise-grade infrastructure, security seals, and uptime guarantees visible to every visitor.
Modern Business Consultancy	Intelligent service discovery, guided onboarding, and expert-centric content.
Premium Digital Agency	Cinematic portfolio, award-winning design quality, and animated case studies.
Structured Operational Organization	CRM-connected workflows, milestone tracking, and real-time client dashboards.

1.2 Functional Outcomes

The platform simultaneously serves seven commercial functions:

- **Digital Headquarters:** The company's primary operational interface for clients and staff.
- **High-Conversion Sales Engine:** Optimized funnels targeting > 4.5% visitor-to-lead conversion.
- **Service Management Entry Point:** Authenticated client portal for project lifecycle management.
- **CRM-Connected Booking System:** Fully automated lead capture through to payment and project activation.
- **Portfolio & Trust Showcase:** Cinematic case studies, live metrics, and social proof systems.
- **Support & Communication Hub:** Omnichannel support: tickets, WhatsApp, live chat, and email.
- **Growth & Analytics Platform:** Real-time KPI dashboards for both clients and internal operations.

PART II

Brand Strategy

& Visual Design System

2. Brand Strategy & Visual Design System

The complete design language specification for senior designers and frontend developers.

2.1 Brand Personality

Every interaction must evoke: "This company is modern, trustworthy, understands business, can manage everything professionally, and is built for scale." The brand intentionally avoids: outdated layouts, generic corporate templates, crowded sections, low-quality icons, and generic stock imagery.

2.2 UI Design Language & Color Strategy

Design Style Pillars

- Gradient Layers: Multi-stop gradients on hero sections, cards, and CTAs — never flat fills.
- Glassmorphism: Frosted-glass panels (backdrop-filter: blur(12px)) on dashboards and modals.
- Elevated Card Systems: box-shadow layering with 3 elevation levels (rest / hover / active).
- Premium Spacing: Generous whitespace (48–96px section padding) to signal confidence.
- Smooth Transitions: All hover/state transitions at 200–300ms cubic-bezier ease-out.
- Vibrant Visual Depth: Layered z-index compositions with floating elements and parallax.

Color Palette Specification

Role	Name	Hex	Usage
Primary Dark	Navy	#0A1628	Headers, footer, nav background
Primary Brand	Royal Blue	#1E3A8A	Section headers, sidebar, active states
Accent / CTA	Vivid Blue	#3B82F6	Buttons, links, highlights, badges
Premium Accent	Violet	#7C3AED	Gradient companions, special CTAs
Success	Emerald	#059669	Paid status, completed milestones
Warning	Amber	#D97706	Pending actions, SLA alerts
Error	Red	#DC2626	Failed payments, critical alerts
Surface Light	Slate-50	#F8FAFC	Page background, card surfaces
Border	Slate-200	#E2E8F0	Dividers, input borders, table grids
Text Primary	Slate-900	#0F172A	Body copy, headings
Text Secondary	Slate-500	#64748B	Meta text, placeholders, labels

2.3 Typography & Icon System

Typography Hierarchy

Element	Font	Size	Weight	Color	Line Height
Hero H1	Inter / Geist	52–64px	800 (Black)	White	1.1

Section H2	Inter	36–42px	700 (Bold)	Navy	1.2
Sub-heading H3	Inter	24–28px	600 (SemiBold)	Royal Blue	1.3
Card Title H4	Inter	18px	600	Slate-900	1.4
Body Copy	Inter	16px	400 (Regular)	Slate-700	1.7
Small / Meta	Inter	13–14px	400	Slate-500	1.5
Button Text	Inter	15px	600	White / Brand	1.0
Dashboard Data	JetBrains Mono	14–20px	500–700	Navy	1.3
Code / API	JetBrains Mono	13px	400	Slate-700	1.6

Icon System

Primary icon library: {B("Lucide React")} (outlined, consistent 24×24 grid). Service category icons: custom 3D isometric vectors rendered in Figma. Dashboard data icons: filled variants for visual weight. Animated icons: Lottie JSON for loading states, success confirmations, and empty states. All icons must align to an 8px grid and maintain 3:1 contrast ratio.

2.4 Motion System & Interaction Design

Hero Motion

Animated gradient mesh background (CSS @keyframes + hue-rotate). Floating layered geometric shapes (Framer Motion float loop). Text reveal: words slide up with stagger 80ms delay. CTA button: shimmer sweep animation on idle.

Scroll Motion

Fade + translateY(24px) → translateY(0) on IntersectionObserver trigger. Staggered card entrance: 60ms delay per card. Animated counters: count-up on viewport entry (duration: 2s ease-out). Sticky section transitions with scale + blur.

Hover Interaction

Service cards: translateY(-6px) + box-shadow elevation (200ms ease). Icon: scale(1.15) + color shift to accent. CTA buttons: scale(1.03) + glow ring (box-shadow: 0 0 20px accent/40%). Navigation links: underline slide-in from left.

Ticker / Marquee

CSS animation: scroll infinite linear. Dual-layer marquee for seamless loop. Speed: 40px/s. Pause on hover. Displays logos, stats, review badges.

Dashboard Motion

Chart bars: animate height from 0 on mount (800ms spring). KPI counters: rolling number animation. Status badges: pulse ring for ACTIVE states. Kanban drag: spring physics via @dnd-kit.

Performance Budget

All animations must score > 90 on CLS and FID. Respect prefers-reduced-motion media query. Use will-change: transform sparingly. GPU-accelerated only (transform, opacity).

PART III

Site Architecture

& Navigation Logic

3. Full Sitemap & Navigation Architecture

3.2 Domain & Sub-Domain Architecture

Sub-Domain	Purpose	Stack	Rendering
Public marketing, SEO, lead gen	Next.js 16, Tailwind v4, RSC	SSG + ISR (< 500ms TTFB)	
Client portal, post-purchase management	Next.js, React Query, Zustand	CSR + JWT Auth	
Internal CRM, operations command	Next.js, Radix UI, Socket.io	CSR + RBAC + VPN	
Backend engine, all business logic	NestJS (TypeScript), MongoDB Atlas	REST + GraphQL /v1/	

3.3 Navigation Logic & Header/Footer

Global Header

CSS class: sticky top-0 z-50 backdrop-blur-md bg-white/80 h-20. Components: Brand logo (SVG), Desktop Mega-Menus, Theme Toggle (dark/light), "Client Login" button, Primary CTA ("Get Started" → /services). Mega-menu opens on hover with animated panel showing all service categories, featured case study, and quick-contact link.

Footer Architecture

Four-column grid layout: (1) Brand column with logo, tagline, social links, app store badges for PWA. (2) Services links. (3) Company links. (4) Contact info + WhatsApp CTA. Below footer: Trust strip with payment logos (Razorpay, Visa, GPay), security badges (SSL, AES-256), and Google rating widget. Copyright line + Privacy / Terms links.

PART IV

Public Website UX

Page-by-Page Architecture

4. Public Website — Page-by-Page UX Specification

4.1 Homepage Architecture

The homepage functions as a premium business landing ecosystem. Every section drives the visitor toward Trust → Understanding → Conversion.

Section: Hero Section

min-h-[90vh] with animated gradient mesh background. Contains: (1) Strong headline: "Your Complete Business Growth Partner". (2) Subtext (12–15 words) with value proposition. (3) Primary CTA: "Explore Services" → /services. (4) Secondary CTA: "Book Free Consultation" → scroll to contact. (5) Six quick-access pill buttons: Website Dev / SEO / GST Registration / Google Business / Branding / CRM. (6) Floating business metric chips (3 stats with icons). (7) Hero visual: isometric 3D dashboard mockup or animated illustration.

Section: Moving Trust Strip

Continuous marquee (CSS animation, infinite, 40px/s) displaying: Client logos, Work sample thumbnails, Payment partners (Razorpay/GPay/Visa), Google Rating badge (4.9★), Security seals. Dual-track for seamless loop. Pause on hover.

Section: Animated Trust Counters

Grid of 4 KPI counters that animate on scroll entry. Examples: "500+ Projects Delivered" / "98% Client Satisfaction" / "< 30 min Response Time" / "50+ Active Clients". Each counter has icon, animated number (count-up), and label.

Section: Service Discovery Grid

Grouped by 6 categories. Each category has header with icon + gradient. Service cards below: modern icon, service image, title, 1-line description, pricing hint ("From █4,999"), delivery time, and CTA. Card hover: translateY(-6px) + glow border + icon scale.

Section: Popular Plans Section

Highlighted best-selling service bundles. Up to 3 featured cards with "MOST POPULAR" badge on center card. Plan comparison toggle (Monthly/One-time). "Save 12%" badge on bundle packages. Feature checklist per plan.

Section: Portfolio Preview

Horizontal scroll with cinematic project cards OR masonry grid. Category filter pills. Each card: project screenshot, category badge, client name, tech stack icons, "View Case Study" CTA.

Section: Why Choose Unity Consult

3-column icon grid: Premium Support / Complete Ecosystem / Fast Delivery / Transparent Pricing / Business Understanding / Proven Results. Each item: animated icon (Lottie), title, 2-line description.

Section: Blog Preview

Latest 3 articles in card grid. Category badge, title, excerpt, reading time, and "Read More" link. "See All Articles" CTA.

Section: Google Reviews Strip

Horizontally scrolling testimonial cards with client photo, name, company, star rating, and review excerpt. Google "G" logo watermark.

Section: Final CTA Section

Dark gradient section with headline "Ready to Grow Your Business?" Two CTAs: "Start a Project" + "Schedule a Call". WhatsApp floating button.

4.2 Service Catalog & Service Detail Pages

Service Catalog (/services)

Hero with search bar (intelligent keyword search with category suggestions). Category tab navigation. Service cards grid (3 columns desktop, 1 mobile). Filter sidebar: price range, delivery time, category. Each card links to dedicated Service Detail page.

Service Detail Page Template

Every service has a fully unique premium detail page with these mandatory sections:

- **Premium Hero Banner:** Custom category-specific gradient background. Service outcome headline (benefit-first). Two CTAs: "Book Now" (primary) + "Get Custom Quote" (secondary). Hero visual: service-specific 3D illustration or device mockup. Breadcrumb: Home > Services > [Category] > [Service Name].
- **Service Overview Block:** Three-part layout: What is it? / Why your business needs it / How Unity Consult delivers it. Accompanied by process illustration.
- **Deliverables List:** Numbered list of every client receipt: files, reports, credentials, setup confirmations, revisions included, support duration.
- **Pricing Tiers:** Three-card pricing system: Standard / Premium / Enterprise. Each card: price, key features checklist, delivery time, advance payment option. Toggle: Pay Full vs Pay 40% Advance (with savings shown). Enterprise card has "Request Quote" instead of fixed price.
- **Workflow Timeline:** Horizontal step-by-step process: Inquiry → Consultation → Booking & Payment → Document Collection → Work Processing → Review & Approval → Delivery → Post-delivery Support. Each step has icon and 2-line description.
- **Required Inputs:** Clear checklist of documents/information client must provide. Each item has upload icon and optional tooltip with examples.
- **FAQ Accordion:** Service-specific Q&A; covering timelines, revisions, ownership, payment logic, and post-delivery support.
- **Related Services:** Cross-sell 2-3 complementary services with card thumbnails.

4.3 Plans & Pricing Page (/pricing)

Dedicated pricing comparison page showcasing all service tiers and packages in a comprehensive view.

- Hero: "Transparent Pricing Built for Growth" with tagline about flexibility and no hidden fees
- Service category tabs: All / Website Dev / SEO / Branding / GST Reg / Business Setup
- Pricing toggle: Monthly Retainer / One-Time Project / Subscription Plans
- Pricing cards grid (3 columns): Standard / Professional / Enterprise tiers per service

- Each card displays: tier name, price, "popular" badge for bestseller, feature checklist, delivery timeline, advance payment % option, CTA button
- Add-ons section: optional upgrades like "Priority Support" / "Extended Revisions" / "Custom Features" with pricing
- FAQ section: payment terms, refund policy, customization scope, timeline questions
- Comparison table: allows side-by-side tier comparison (accessible via toggle)
- Trust badges: payment security, money-back guarantee, 24h response promise
- Final CTA: "Choose Your Plan" or "Get Custom Quote" buttons
- Schema markup: Product + PriceSpecification JSON-LD for rich snippet display

4.4 Support & Contact Experience

Multi-channel support system allowing clients to reach out through their preferred channels.

- Floating WhatsApp button (bottom-right): click opens WhatsApp Web with pre-filled message template
- Floating email icon: opens email compose with subject "Inquiry"
- Floating call button: tel: link for direct phone call
- Embedded contact form: Name / Email / Phone / Service / Message + reCAPTCHA
- Google Maps embed: office location with directions link
- Support ticket creation: clients can open tickets from contact form (linked to client portal)
- Live chat widget: optional Drift / Crisp integration for real-time chat
- Response time SLA display: "Average response: < 30 minutes"
- After-hours message: when support is offline, show "We'll respond on [next business day]"

4.5 Other Key Public Pages

Portfolio (/portfolio)

Masonry or horizontal-scroll layout. Filter: Websites / Branding / Legal / Marketing / SEO / CRM. Each project card: full-bleed screenshot, hover overlay with project name + category + CTA. Individual case study page: problem → approach → solution → results + metrics.

Blog (/blog)

Category taxonomy: Business Setup / Digital Marketing / SEO / Legal / Branding / Case Studies. Article index: featured article hero + card grid. Each post: author, date, reading time, category badge, OG image, table of contents, related service CTA, related articles. Schema: Article + BreadcrumbList JSON-LD on every post.

About Us (/about)

Brand story section with timeline. Team grid with photos, names, and roles. Mission / Vision / Values three-column block. Awards, partnerships, and media mentions. Embedded Google Maps for office location.

Contact (/contact)

Split layout: left = contact form (Name, Email, Phone, Service of Interest, Message), right = contact details (phone, email, WhatsApp, address). Google Maps embed. WhatsApp direct link. Form submission: API POST, triggers admin WhatsApp alert + client welcome email.

Careers (/careers)

Open positions listed as expandable cards: Role, Department, Type (Full/Part/Remote), description, requirements, and "Apply Now" modal with CV upload. Application submitted to admin CRM recruitment module.

Local SEO Pages (/location/[city])

Programmatically generated pages: "Website Development in Mumbai", "GST Registration in Hyderabad", etc. Each page: localized headline, local keyword density, Google Business embed, local testimonials, service cards, LocalBusiness JSON-LD schema.

PART V

Service Specifications

All 6 Core Services — Complete Business Logic

5. Service-by-Service Specifications

5.1 Web Development

Custom websites and web applications for modern businesses

Target Audience

Startups, SMEs, enterprises needing a professional online presence or custom web app.

Pricing Tiers

Plan	Price	Scope / Timeline
Standard	■9,999	5 pages, responsive, 7 days

----------	---------------------	------------------	-----------------	------------------	--------------	-------------------	------------------------

5.4 Digital Marketing

Performance-first paid and organic marketing campaigns

Target Audience

Businesses needing rapid lead generation, brand visibility, and measurable ROI from ad spend.

Pricing Tiers

Plan	Price	Scope / Timeline
Starter	■7,999/mo	Google Ads or Meta Ads, ■10K ad budget
Growth	■14,999/mo	Multi-platform, ■25K budget, creatives included
Scale	■24,999/mo	Full funnel, ■50K budget, weekly optimization

Deliverables

- Campaign strategy and audience research
- Ad account setup / audit
- Creative assets (static + video banners)
- A/B testing framework
- Weekly performance reports

- Conversion tracking setup (GTM, Pixel)
- Landing page recommendations
- Monthly strategy call

Booking Form Fields

- Business type and target customer profile
- Platforms to advertise on (Google / Meta / LinkedIn)
- Monthly ad budget available
- Campaign objective (leads / sales / brand awareness)
- Existing ad account access (if applicable)
- Target geography
- Key offerings to promote

Workflow Stages

1. Strategy Brief	2. Account Setup	3. Creative Production	4. Campaign Launch	5. Week 1 Optimization	6. A/B Testing	7. Report & Review	8. Scale / Adjust
-------------------	------------------	------------------------	--------------------	------------------------	----------------	--------------------	-------------------

5.5 Legal Registration

Fast, accurate business registration and compliance services

Target Audience

Entrepreneurs and SMEs needing GST, company registration, trademark, FSSAI, or other statutory compliance.

Pricing Tiers

Plan	Price	Scope / Timeline
GST Registration	■1,499	PAN + Aadhar, 3–5 business days
Pvt Ltd / LLP	■7,999	Full incorporation, 7–14 days
Trademark	■4,999	Search + filing, 2–3 days for filing

Deliverables

- Government portal filing and tracking
- Document verification and validation
- Registration certificate (soft + hard copy)
- GSTIN / CIN / Trademark number
- Compliance checklist for next steps
- Free consultation on annual compliance
- Dedicated registration executive

Booking Form Fields

- Registration type required
- Business activity / category
- Owner full name and PAN
- Aadhar number (encrypted upload)

- Business address proof
- Bank account details (for GST)
- Existing registrations (if any)
- Preferred business name (for company reg)

Workflow Stages

1. Document Collection	2. Verification	3. Portal Filing	4. Government Processing	5. Certificate Receipt	6. Compliance Briefing	7. Archive
------------------------	-----------------	------------------	--------------------------	------------------------	------------------------	------------

5.6 Branding & Design

Premium brand identity and creative design services

Target Audience

Businesses launching, rebranding, or needing professional design assets for marketing and operations.

Pricing Tiers

Plan	Price	Scope / Timeline
Starter	■3,999	Logo + color palette + fonts, 5 days

Premium	■19,999	Complete brand system + marketing templates + pitch deck, 18 days

Deliverables

- Logo files (SVG, PNG, PDF) in all variants
- Brand style guide (colors, typography, usage)
- Business card & letterhead design
- Social media profile kit (covers + posts)
- Email signature design
- Pitch deck / presentation template
- Brand assets ZIP (print-ready + digital)
- 2 rounds of revisions included

Booking Form Fields

- Business name and tagline (if decided)
- Industry and target audience
- Brand personality keywords (3–5)
- Competitor brand examples to avoid
- Color preferences (or existing brand colors)
- Reference brands / styles liked
- Logo usage: digital only / print / signage
- Deliverables needed (select from list)

Workflow Stages

1. Brand Brief	2. Mood Board	3. Concept Presentation	4. Design Iteration	5. Client Approval	6. File Preparation	7. Asset Delivery
----------------	---------------	-------------------------	---------------------	--------------------	---------------------	-------------------

PART VI

Booking Engine

& Complete Client Journey

6. Booking Engine & Client Journey

6.1 Complete Visitor-to-Client Conversion Flow

Unity Consult must operate as a structured digital service commerce ecosystem. The booking flow is designed to feel like a premium SaaS onboarding process — guided, professional, and friction-minimized at every step.

Step 1: Discovery

Visitor lands on homepage or service page via organic/paid/referral. Service discovery grid or search leads to Service Detail page.

Step 2: Evaluation

User reviews pricing tiers, deliverables, workflow timeline, FAQs, and client testimonials. Trust indicators visible throughout.

Step 3: Intent

User clicks "Book Service" or "Get Started". Auth guard activates: if unauthenticated → Login/Register modal. Google SSO available for one-click registration.

Step 4: Authentication

New user: Name, Email, Phone, Password + email OTP verification. Existing user: Email + Password with "Forgot Password" flow. After auth, user is returned to booking flow (not homepage).

Step 5: Dynamic Booking Form

Service-specific intake form renders based on selected service. Multi-step with progress indicator (Step 1 of 3). Auto-save drafts every 30 seconds. Real-time pricing update as options are selected.

Step 6: Plan & Payment Selection

Plan cards displayed (Standard / Premium / Enterprise). Toggle: "Pay Full Amount" vs "Pay 40% Advance". Price displayed prominently with advance amount calculated. Summary card shows: service, plan, amount, GST breakdown.

Step 7: Payment

Razorpay checkout triggers. Mobile: opens GPay/PhonePe directly. Desktop: shows QR code + UPI ID + bank transfer option. Loading state during payment processing.

Step 8: Verification

Backend webhook receives payment.captured from Razorpay. Signature verified with HMAC-SHA256. Invoice status updated DRAFT → PAID. Project status: PENDING_PAYMENT → ACTIVE.

Step 9: Confirmation

Full-screen success animation. PDF invoice auto-generated and emailed. Client portal notification created. WhatsApp message sent to client and admin. CRM lead marked WON and converted to Project.

Step 10: Portal Onboarding

Client redirected to `app.unityconsult.com/dashboard`. Welcome modal: "Your project is now active. Upload your documents to get started." Document upload module unlocked. Assigned manager visible.

6.2 Payment Architecture & UX

Payment Models

Payment Model	Logic & Trigger
Full Payment	100% upfront. 5% discount applied. Immediate project activation.
40% Advance	Partial payment to start project. Remaining due at milestone completion.
Milestone Billing	For enterprise projects: payments tied to delivery stages.
Recurring Subscription	For SEO, marketing, and maintenance retainers (monthly billing).
Custom Quotation	Enterprise: admin generates manual invoice; client pays via link.

Payment UX: Mobile vs Desktop

Aspect	Mobile Experience	Desktop Experience
Primary Method	Deep-link opens GPay/PhonePe/Paytm	Dynamic QR code generated
UPI	One-tap UPI intent launch	UPI ID copy button
Cards	Auto-fill via browser	Full card form
Net Banking	Simplified bank list	Full bank dropdown
Verification	In-app confirmation + SMS	On-screen confirmation

6.3 Authentication Flows & Account Management

Comprehensive authentication system covering registration, login, and account recovery.

Sign Up

- Email address entry with validation (check if already registered)
- Password creation with strength meter (min 8 chars, 1 uppercase, 1 number, 1 symbol)
- Name + phone number
- Email OTP verification (6-digit code, 10-minute expiry, resend available after 30s)
- Success: account created, auto-login, redirected to original booking flow or dashboard

Login

- Email + password fields with "Forgot Password?" link
- Error handling: invalid email format / account not found / wrong password
- Remember me checkbox (30-day cookie)
- Google/Social SSO button for one-click login
- Post-login: return to referrer (booking flow) or dashboard

Forgot Password

- Email input with validation
- Password reset link sent to email (valid for 1 hour)
- Confirmation message: "Check your email for reset link"
- User clicks link → lands on reset password page (token validated server-side)

Reset Password

- New password field + confirm password
- Same strength meter as sign-up
- Visual feedback on strength
- Success: auto-login, password updated, session refreshed
- Failure: "Link expired" or "Invalid token" message with "Resend email" CTA

Change Password (Authenticated)

- Current password field (for verification)
- New password + confirm password fields
- Same strength validation
- Success modal: "Password changed successfully"

Logout All Sessions

- In portal settings: "Logout all other devices" button
- Confirmation modal: "This will log you out of all other sessions"
- Action: invalidates all refresh tokens except current one
- User remains logged in on current device
- Other devices receive notification (if logged in to admin portal)

Account Recovery

- If user suspects account compromise: "Cannot access your account?" link
- Identity verification: email confirmation + security questions
- Alternative: customer support verification via phone
- Reset password + force logout all sessions + send security alert email

6.4 Service-Wise Booking Form Definitions

Each service has unique form fields, validation rules, and approval workflows.

Website Development Service

- Fields: Business type, current website status (yes/no), desired features (checkboxes), sitemap/pages list
- Validation: at least 5 features selected, business name required, page list minimum 3 pages
- Approval: requires design team review (3–5 business days)
- Additional inputs: brand guidelines PDF, competitor links, logo files

GST Registration Service

- Fields: Business name, business type, annual turnover, owners count, PAN numbers (list)
- Validation: PAN format check, turnover numeric, business type not empty
- Approval: auto-approved, immediate project activation

- Additional inputs: incorporation certificate, address proof, ownership docs

Branding Service

- Fields: Brand name, industry, target audience, design style preference (multi-select), budget range
- Validation: brand name min 2 chars, industry selection required, style preference required
- Approval: requires brand strategist review (2–3 days)
- Additional inputs: reference designs (links), color palette preferences, existing logo

SEO Service

- Fields: current website URL, target keywords (comma-separated), content language, competition level
- Validation: valid URL format, at least 3 keywords, language from dropdown, level required
- Approval: auto-approved, SEO audit initiated immediately
- Additional inputs: GA/GSC credentials (optional), content calendar template

CRM Implementation

- Fields: business size, current CRM (if any), team size, primary workflow bottleneck (dropdown)
- Validation: all fields required, business size from preset options
- Approval: requires CRM specialist consultation (schedule 30-min call)
- Additional inputs: existing spreadsheets/databases, user access requirements

Email Marketing Setup

- Fields: current email list size, average monthly sends, primary goal (dropdown)
- Validation: list size numeric, goal required
- Approval: auto-approved, template library access granted immediately
- Additional inputs: existing email provider credentials (Mailchimp/ConvertKit/etc.)

6.5 Payment Edge Cases & Error Handling

Comprehensive handling of payment failures, pending states, and recovery flows.

Payment Failed

- Razorpay webhook status: payment.failed
- Invoice status remains DRAFT
- Client shown error modal: "Payment failed. Reason: [Razorpay error message]"
- Retry button: triggers Razorpay checkout again
- Alternative payment option: show UPI ID or bank transfer details for manual payment
- Admin notification: "Payment failed for [Client Name] - [Amount]"

Payment Pending Verification

- Status: bank transfer or cheque payment awaiting clearance
- Invoice status: PARTIALLY_PAID (if advance received)
- Client notification: "Your payment is being verified. We'll confirm within 2 business days."
- Admin portal: shows pending payments queue for manual verification
- Automatic webhook check every 24h for bank payment confirmation

Retry Pending Payment

- If payment fails, client can retry within 30 days
- Retry link sent via email: "Complete your payment to activate your project"
- Each retry creates new Razorpay order (maintains idempotency)
- After 3 failed retries: escalate to admin (manual follow-up required)
- Admin can generate payment link for manual payment entry

Refund Initiated

- When refund is issued: Razorpay refund API triggered
- Refund status: INITIATED → PROCESSING → COMPLETED
- Client notification: "Refund of [Amount] initiated. Processing within 5–7 business days."
- Admin logs reason: scope mismatch / client cancellation / service not delivered
- Invoice status: REFUNDED

Balance Due / Partial Payment

- Invoice status: PARTIALLY_PAID when advance received
- Portal shows: "Paid: █5,000 / Due: █15,000"
- "Pay Remaining" CTA triggers Razorpay for outstanding balance
- Milestones locked until balance is paid
- Invoice aging: OVERDUE badge if due date passed

Invoice Resend

- Client can request invoice resend from portal history
- Admin can manually resend invoice PDF via email
- Resend creates event log (tracked for audits)
- Option to email to different recipient (e.g., accounting team)

Payment History & Tracking

- Complete transaction log per invoice: date, amount, method, status, transaction ID
- Failed transaction details: error code, reason, retry link
- Refund history: amount, reason, date processed
- Settlement tracking: when funds appear in business account
- GST compliance: all transactions logged for tax audit

6.6 Confirmation, Onboarding & Order Tracking

Auto-Generated Invoice Specification

- Invoice number (format: UC-YYYY-XXXXX)
- GST-compatible format with HSN/SAC code
- Subtotal, tax (18% GST), total breakdown
- Client and company details with GSTIN
- Service description and plan selected
- Payment method and transaction ID (Razorpay)
- Downloadable PDF — stored in object storage, linked in client portal

Client Milestone Tracking

Clients track project progress via a visual timeline stepper in the portal. Each milestone shows: status (pending/active/complete), assigned team member, expected completion date, and action button (Approve / Request Revision). Completing a milestone triggers the next-stage invoice if milestone billing applies.

PART VII

Client Portal UX

Post-Purchase Service Management

7. Client Portal — Full UX Specification

app.unityconsult.com — The authenticated client operations environment.

7.0 Portal Layout Architecture

Global layout: CSS Grid — grid-cols-[280px_1fr] h-screen. Left sidebar: fixed navigation with collapsible on mobile (slide-in drawer). Top bar: breadcrumb trail + notification bell + profile avatar. Content area: scrollable central pane, max-w-5xl, 32px padding.

7.1 Dashboard Overview

- Active services cards with status badges (ACTIVE / REVIEW / COMPLETED)
- Pending tasks list (uploads due, approvals required, payments pending)
- Recent activity feed (last 5 actions with timestamps)
- Payment summary widget: total paid, balance due, next due date
- Support messages preview (latest 2 unread tickets)
- Quick-action buttons: Upload Document / Pay Balance / Message Team
- Upcoming deadlines calendar widget

7.2 Project Tracking

- Visual timeline stepper per project (horizontal, 8–9 stages)
- Each stage: icon, title, status chip, date completed / ETA
- Assigned project manager card with WhatsApp contact button
- Milestone approval: one-click "Approve" or "Request Revision" CTA
- Revision request modal: text field + optional file attachment
- Delivery log: history of all deliverables with download links
- Project notes: internal thread between client and manager

7.3 Document Hub

- Drag-and-drop upload zone with dotted border and animated icon
- Accepted formats and file size limits shown
- Upload progress bar per file
- Categorized storage: Legal Documents / Brand Assets / References / Approved Files
- File list with name, size, upload date, uploader, and status (Pending Review / Accepted / Rejected)
- Secure pre-signed object-storage URL system — client uploads bypass backend (direct to storage)
- Download and delete actions per file

7.4 Financial Management & Payment Timeline

- Invoice list table: Invoice #, Date, Service, Amount, Status (PAID/UNPAID/OVERDUE)
- Status color coding: green/red/amber
- Download PDF invoice button per row

- Payment timeline visualization: full sequence of invoices (advance → milestone → final)
- Milestone-wise payment map: shows which payment corresponds to which project stage
- "Pay Remaining Balance" CTA triggers Razorpay modal inline
- Transaction history: gateway ref, payment method, timestamp, amount, success/failure status
- Payment retry option for failed transactions with clear error message
- Invoice history with aging analysis (0–30 days, 30–60 days, 60+ days overdue)
- Refund tracking: if any refunds issued, show refund amount + date + reason
- GST summary for financial year (exportable CSV)
- Payment terms legend: "40% advance required for booking, 60% at completion"
- Automatic payment reminders: "Payment due in 3 days" badge on overdue invoices

7.5 Support & Revision Management

- Support ticket dashboard: status pipeline view (OPEN / IN_PROGRESS / RESOLVED / CLOSED)
- Create new ticket: category (Technical Issue / Revision Request / General Query / Billing), priority, description, optional file attachment
- Ticket detail view: threaded conversation with admin responses, timestamps, and read indicators
- Revision request tracking: visual counter of remaining revisions allowed per service
- Revision history: each revision request with description, submitted by, admin response, and completion timestamp
- Document request notification: when admin requests specific files, show inline CTA to upload
- Direct message tab for informal project queries (separate from support tickets)
- Support SLA display: "We'll respond within 4 hours" / "Average response: 45 minutes"
- Satisfaction rating: post-resolution 1–5 star prompt
- Notification inbox: all system events (payment reminder, revision ready, ticket update) with read/unread toggle
- Email notification preferences: choose which updates to receive by email vs portal only
- Downloadable deliverables list: all project files organized by milestone with download links

PART VIII

Admin CRM

Full UX Specification

8. Admin CRM — Full UX Specification

admin.unityconsult.com — The operational command center for all Unity Consult staff.

8.0 Admin Layout & Authentication

Layout: CSS Grid — grid-cols-[240px_1fr] with collapsible sidebar. Top bar: global search, notification center, quick actions, admin profile. Authentication: JWT + RBAC. Admin panel accessible only via company VPN + 2FA. Session timeout: 4 hours with silent refresh via HttpOnly cookie. Audit log records every destructive action (IP, timestamp, user).

8.1 Role-Based Access Control (RBAC)

Role	Module Access	Key Permissions
Super Admin	All modules	Full CRUD, user management, system config
Operations Manager	Leads, Orders, Projects, Analytics	Assign tasks, update stages, view reports
Finance Manager	Finance, Invoices, Payments	Generate invoices, process refunds, export reports
CRM Executive	Leads, Clients, Communication	Update pipeline, send messages, log interactions
Support Executive	Tickets, Communication, Orders (view)	Create/close tickets, reply to clients
SEO/Content Team	CMS, Blog, Portfolio, Services (view)	Publish content, manage media
Design Team	Orders (assigned), File uploads	Upload deliverables, update project stage

8.2 Master Dashboard Analytics

The admin homepage is a live operational command center. All widgets update in real-time via Socket.io.

- **Revenue KPI Cards (row):** Today's Revenue / Month-to-Date / Outstanding AR / Projected Month-end
- **Funnel Metrics:** Total Leads / Contacted / Quoted / Won (%) / Lost (%)
- **Active Projects Widget:** Count by stage: Active / Under Review / Overdue
- **Support Health:** Open tickets / Avg response time / SLA breaches today
- **Live Activity Feed:** Real-time stream: "Client X uploaded GST doc", "Payment █9,999 received"
- **Revenue Chart:** Bar chart: last 12 months revenue. Toggleable: by service / by category
- **Lead Source Pie:** Organic / WhatsApp / Referral / Paid / Direct
- **Top Services Table:** Service name, bookings this month, revenue, avg delivery time
- **Team Performance:** Projects per manager, ticket resolution rate, pending actions
- **Upcoming Deadlines:** Calendar list: projects due in next 7 days with client name + service

8.3 Kanban Lead Pipeline

Horizontal scrollable board. Columns: NEW → CONTACTED → CONSULTATION SCHEDULED → QUOTED → NEGOTIATING → WON → LOST. Drag-and-drop via @dnd-kit — dropping a card instantly PATCHes /api/v1/admin/leads/:id/status and emits a Socket.io event to refresh all connected admin sessions simultaneously.

Lead Card Contains:

- Client name + company (bold)
- Interested service + tier
- Lead source badge (color-coded)
- Budget estimate
- Assigned executive
- SLA timer (red if overdue)
- Quick actions: WhatsApp template / Email sequence / Convert to Project
- Internal notes count + last activity timestamp

SLA Rule: If a lead remains in NEW for > 2 hours without action, the card border turns RED and the assigned manager receives a WhatsApp alert via Twilio. Marking a card WON opens a modal to create a Project and Invoice immediately.

8.4 Service & Pricing Management

Admins have full CRUD control over the service catalog. Service creation uses a multi-step form wizard:

- Step 1 — Basic Info: Title, slug, category, tagline, SEO meta (title/description/OG image)
- Step 2 — Pricing: Add pricing tiers (name, price, features list, delivery time, advance %)
- Step 3 — Content: Rich text editor for service description, deliverables, FAQ
- Step 4 — Booking Form Builder: Drag-and-drop field builder (text, select, file upload, checkbox)
- Step 5 — Workflow Stages: Define project milestone names and order for this service
- Step 6 — Review & Publish: Preview rendering + toggle visibility (draft/published)

8.5 Order & Project Management

Full visibility into every active and historical project. Projects filtered by: Status / Service / Assigned Manager / Date Range / Client.

- Client profile card (name, email, phone, total spend)
- Service + plan purchased
- Payment summary: paid / balance / invoice history
- Milestone progress stepper (update stage, mark complete)
- Deliverable upload: drag-and-drop files that appear in client portal instantly
- Document request: send client a notification to upload specific file
- Internal notes thread (not visible to client)
- Communication log: email/WhatsApp sent history
- Revision history with timestamps and requester
- "Close Project" action: triggers final invoice + Google Review email

8.6 Content Management System (CMS)

Homepage CMS

- Hero: edit headline, subtext, CTA text/links, background gradient
- Trust counters: update numbers and labels
- Marquee: add/remove logos and images

- Featured services: select which services appear in discovery grid
- Popular plans: choose featured pricing tiers

Blog Management

- Create/edit posts: rich WYSIWYG editor (TipTap), markdown supported
- SEO fields per post: meta title, description, canonical, OG image, focus keyword
- Author assignment, category, tags, featured image
- Schedule publish (set future date/time)
- Revision history with diff view

Portfolio Management

- Upload project screenshots (multiple, reorderable)
- Project details: client name (optional), category, description, tech stack, live URL
- Results/metrics section: before/after screenshots + measurable outcomes
- Visibility toggle and featured flag

Testimonials & Reviews

- Import from Google Business Profile (manual or API)
- Add manual testimonials: photo, name, company, rating, text
- Toggle display on homepage / service pages

8.7 Finance & Revenue Management

Finance module gives the Finance Manager complete revenue visibility without access to CRM or content.

- Revenue dashboard: daily / weekly / monthly / annual totals
- Revenue breakdown: by service, by category, by payment method
- Outstanding AR table: unpaid invoices sorted by age (30/60/90+ days)
- Manual invoice generation: select client, service, amount, due date
- Refund processing: initiate Razorpay refund with reason logging
- GST report: IGST/CGST/SGST breakdown, exportable for CA
- Settlement reports: Razorpay payout reconciliation
- Revenue forecasting widget: projected next-month based on active subscriptions

8.8 Support Ticket Management

- Ticket queue with priority levels: CRITICAL / HIGH / MEDIUM / LOW
- Category filters: Technical Issue / Billing / Revision Request / General Query
- SLA tracking: response time target displayed per priority (Critical: 1hr, High: 4hr)
- Threaded reply with internal notes (visible only to staff)
- Ticket escalation: reassign to senior or different department
- Resolution templates: pre-written responses for common issues
- Client satisfaction rating: post-resolution 1–5 star prompt
- Analytics: avg response time, resolution rate, tickets by category

8.9 Media Library & Asset Management

Centralized repository for all brand assets, service deliverables, and content media.

- Drag-and-drop upload with object-storage integration (global CDN delivery)
- Asset categorization: Service Images / Mockups / Case Studies / Trust Badges / Testimonials / Blog Media / Portfolio Screenshots
- Bulk upload with auto-metadata extraction (dimensions, file size, MIME type)
- Usage tracking: see where each asset is used (service page, blog post, email, etc.)
- Version control: upload new versions, keep history of previous uploads
- Metadata editor: alt text, tags, license info, creative notes
- Search & filter: by category, tag, date uploaded, file type, usage count
- Bulk export: download selected assets in one ZIP
- Smart cropping tool: pre-sized crops for different platforms (hero, square, social)

8.10 SEO Page Manager

Dedicated interface for managing location landing pages, canonical URLs, robots rules, and structured data markup.

- SEO pages overview: list all location pages, service pages, blog posts with SEO score (0–100)
- Meta tag editor: page title, meta description, canonical URL, robots (index/noindex/follow/nofollow)
- Open Graph (OG) editor: OG title, description, image, type for social sharing
- Schema markup generator: presets for LocalBusiness, Product, BlogPosting, FAQPage
- Internal linking recommendation: AI suggestions based on related content
- Keyword target editor: focus keyword, related keywords, target density
- Page performance: connected to Google Search Console data (impressions, clicks, avg position)
- Sitemap & robots.txt editor: auto-generated with manual overrides for specific URLs
- Mobile-friendly test: instant mobile usability report
- Bulk SEO update: change meta tags for multiple pages at once

8.11 Testimonials Manager

Manage client testimonials from multiple sources with curation and display controls.

- Testimonial sources: Google Business Profile (auto-import), manual entry, email form, social media
- Bulk import: sync Google reviews quarterly or on-demand
- Curation dashboard: pending testimonials queue for approval before display
- Rating & filtering: 1–5 stars, service-wise grouping, verified vs. unverified badges
- Display rules: choose which testimonials appear on homepage, service pages, client portal
- Photo upload: attach client avatar (auto-crop to circle)
- Scheduling: set testimonials to appear/disappear on specific dates
- Analytics: track which testimonials drive conversions (if used in email campaigns)
- Duplicate detection: flag similar testimonials to prevent redundancy

8.12 Career Applications Manager

Recruitment hub for tracking job applications, interview schedules, and hiring pipeline.

- Job opening CRUD: create vacancies, set description, requirements, salary range, deadline
- Application funnel: Submitted → Under Review → Shortlisted → Interview Scheduled → Offer → Hired / Rejected
- Resume parser: auto-extract candidate name, email, phone, education, experience from uploaded PDF
- Interview scheduling: calendar integration (Google Calendar / Outlook), scheduling links for candidates
- Feedback form: post-interview feedback template (rating, strengths, areas for improvement, recommendation)
- Bulk email: send offers, rejection letters, or next-step instructions to multiple candidates
- Analytics: applications by source, conversion rate by stage, time-to-hire
- Career page visibility: toggle job opening visibility from career page

8.13 Support Ticket Board

Enhanced ticket management with visual board view, collaboration tools, and SLA monitoring.

- Kanban board view: columns for OPEN → IN_PROGRESS → RESOLVED → CLOSED
- Real-time collaboration: multiple admins can see active ticket viewers (presence indicator)
- Ticket templates: quick-response templates for common issues (billing inquiry, revision request, etc.)
- Merge tickets: combine duplicate issues into single ticket with message consolidation
- Ticket dependencies: link related tickets (e.g., this revision is blocking that project)
- Bulk actions: bulk reassign, bulk close, bulk add tag across multiple tickets
- SLA heat map: color-coded urgency by time-to-deadline (green/yellow/red)
- Customer satisfaction survey: auto-send after ticket closure, track trends over time

8.14 Reporting & Data Export Tools

Comprehensive export functionality for data analysis, audits, and client delivery reports.

- Report builder: select date range, filters (service, client, status), metrics to include
- Export formats: Excel (.xlsx with multi-sheet workbooks), CSV, PDF, JSON API
- Leads report: lead source breakdown, conversion rate by source, cost per lead, lead quality score
- Bookings report: service-wise bookings, tier distribution, revenue per service, repeat client %
- Payments report: daily/weekly/monthly revenue, payment method breakdown, failed transaction tracking
- Invoices report: issued/paid/overdue invoices, aging analysis, credit limit utilization
- Projects report: projects by status, delivery time variance, team utilization, project profitability
- Support report: ticket volume, avg resolution time, SLA compliance, agent performance
- Financial export: P&L; summary, GST-compliant tax report, bank reconciliation file
- Custom report builder: chain conditions (filter + sort + aggregate) and save as templates
- Scheduled exports: set up daily/weekly emails of report to finance/operations team

PART IX

Enterprise Technology Stack

2026 Standard

9. Enterprise Technology Stack (2026 Standard)

Frontend Ecosystem

Core Framework	Next.js 16 (App Router) — React Server Components for zero-JS static pages
UI Library	React 19 with concurrent rendering, Suspense boundaries, and server actions
Styling	Tailwind CSS v4 with native CSS variables and JIT compilation
Components	Radix UI — WAI-ARIA accessible primitives (Dialog, Select, Tabs, etc.)
Animation	Framer Motion 11 — declarative animation orchestrations and gesture handling
State (Client)	Zustand 5 — lightweight global state for auth token, cart, UI state
State (Server)	TanStack Query v5 — aggressive caching, background refetch, mutations
Forms	React Hook Form + Zod schema validation
Icons	Lucide React (outlined) + custom Lottie animations
Rich Text	TipTap editor (CMS and blog management)

Backend Ecosystem

Framework	NestJS (TypeScript) on Fastify — modular, dependency-injected architecture
Database	MongoDB Atlas (M30+ cluster) — flexible document schema, horizontal scaling, managed cloud deployment
ORM	Mongoose v8 — schema validation, middlewares, plugins, and type safety via TypeScript
Cache / Sessions	Redis (Upstash) — JWT blacklists, rate limiting, pub/sub, session store
Real-Time	Socket.io — WebSocket gateway for admin dashboards and client notifications
File Storage	Object storage with pre-signed URLs — AES-256 encryption, private buckets
Payment	Razorpay — orders API, webhook payment.captured, refund API
Email	Resend (transactional) — React Email templates compiled server-side
WhatsApp	Twilio / Meta Cloud API — template messages and business notifications
Auth	Custom JWT (access: 15min) + HttpOnly refresh cookie (7 days) + Bcrypt cost 12

Infrastructure & DevOps

Frontend Hosting	Edge hosting network — automatic CDN, preview deployments, analytics
Backend Hosting	Managed Kubernetes or Railway.app — auto-scaling Node containers
CI/CD	GitHub Actions — lint → test → Docker build → deploy on merge to main
DNS / WAF	Cloudflare — DNS management, DDoS protection, WAF rules
Monitoring	Datadog APM + Sentry error tracking + UptimeRobot health checks
Security	NestJS CSRF double-submit, Helmet.js headers, rate limiter (Redis), CORS whitelist
Backups	Automated MongoDB Atlas snapshots (daily), S3 versioning enabled, disaster recovery plan with RTO 4h / RPO 1h
Environment	Dotenv + managed secrets vault — zero hardcoded secrets in codebase

PART X

Database Schema

MongoDB Atlas + Mongoose

10. Comprehensive Database Schema (MongoDB)

Flexible document-based architecture using MongoDB Atlas for scalability, nested data support, and dynamic service configurations. All relationships use ObjectId references with Mongoose ORM for schema validation.

10.1 Users & Authentication Collections

users	_id (ObjectId), email (unique), passwordHash, role (SUPER_ADMIN CRM_EXEC FINANCE SUPPORT DESIGN SEO HR CONTENT CLIENT), profile {firstName, lastName, phone, avatar, bio}, isVerified, isActive, emailVerifiedAt, lastLoginAt, loginHistory [{timestamp, ipAddress, userAgent}], sessionTokens [], createdAt, updatedAt
clientProfiles	_id, userId (ref Users), companyName, gstNumber, industryType, companySize, address {street, city, state, country, zip}, phone, website, servicePreferences [], budgetRange, customFields {}, createdAt, updatedAt
adminProfiles	_id, userId (ref Users), department, jobTitle, permissions {canManageLeads, canManageProjects, canManageFinance, canExport, canViewAnalytics}, reportingTo (ref Users), metrics {leadsHandled, projectsManaged, tasksCompleted}, metadata {}, createdAt, updatedAt
refreshTokens	_id, userId (ref Users), tokenHash, expiresAt, isRevoked, ipAddress, userAgent, createdAt
otpCodes	_id, userId (ref Users), code, type (EMAIL_VERIFY RESET_PASSWORD CHANGE_PASSWORD ACCOUNT_RECOVERY), expiresAt, isUsed, usedAt, attempts

10.2 Service Catalog Collections

serviceCategories	_id, name, slug (unique), icon, description, displayOrder, isActive, createdAt
services	_id, categoryId (ref serviceCategories), title, slug (unique), shortDescription, longDescription, basePrice, advancePercent, deliverables [{title, description, format}], pricingTiers [{tierName, price, features[], deliveryDays}], addOns [{name, description, price}], dynamicFormSchema {fields[]}, seoMeta {title, description, keywords, ogImage}, isPublished, displayOrder, createdAt, updatedAt

10.3 Lead & Sales Collections

leads	<code>_id</code> , <code>clientId</code> , <code>email</code> , <code>phone</code> , <code>company</code> , <code>source</code> (ORGANIC GOOGLE_AD S FACEBOOK REFERRAL DIRECT COLD_EMAIL), <code>interestedServiceId</code> (ref services), <code>budget</code> , <code>notes</code> , <code>leadScore</code> (0-100), <code>status</code> (NEW CONTACTED QUOTED NEGOTIATING WON LOST ARCHIVED), <code>assignedAdminId</code> (ref adminProfiles), <code>interactions</code> [{type, content, timestamp, adminId}], <code>lastContactedAt</code> , <code>followUpDueDate</code> , <code>metadata</code> {}, <code>createdAt</code> , <code>updatedAt</code>
leadInteractions	<code>_id</code> , <code>leadId</code> (ref leads), <code>adminId</code> (ref adminProfiles), <code>type</code> (CALL EMAIL WHATSAPP MEETING SMS), <code>content</code> , <code>attachments</code> [], <code>outcome</code> , <code>nextStepPlanned</code> , <code>scheduledAt</code> , <code>completedAt</code> , <code>createdAt</code>

10.4 Booking & Project Collections

bookings	<code>_id</code> , <code>clientId</code> (ref users), <code>serviceId</code> (ref services), <code>tierId</code> , <code>requestedFeatures</code> [], <code>customRequirements</code> , <code>budgetApproved</code> , <code>advanceAmount</code> , <code>status</code> (INQUIRY QUOTE_SENT QUOTE_ACCEPTED ADVANCE_PAID IN_PROGRESS U NDER_REVIEW REVISION_REQUESTED REVISION_PENDING COMPL ETED ARCHIVED CANCELLED), <code>timeline</code> {startDate, targetCompletionDate, actualCompletionDate}, <code>assignedManagerId</code> (ref adminProfiles), <code>deliverables</code> [], <code>revisionRounds</code> {requested, completed, remaining}, <code>notes</code> [], <code>metadata</code> {}, <code>createdAt</code> , <code>updatedAt</code>
projects	<code>_id</code> , <code>bookingId</code> (ref bookings), <code>clientId</code> (ref users), <code>serviceId</code> (ref services), <code>title</code> , <code>description</code> , <code>status</code> (PENDING_PAYMENT ACTIVE UNDER_REVIEW REVISION COMPLETED ARCHIVED), <code>totalValue</code> , <code>amountPaid</code> , <code>balanceDue</code> , <code>paymentTerms</code> {upfront, milestones []}, <code>milestones</code> [{title, description, dueDate, isCompleted, completedAt, deliverables}], <code>tasks</code> [{title, assignedTo, dueDate, status, priority}], <code>attachments</code> [], <code>internalNotes</code> [], <code>assignedManagerId</code> (ref adminProfiles), <code>startedAt</code> , <code>completedAt</code> , <code>createdAt</code> , <code>updatedAt</code>
workflows	<code>_id</code> , <code>name</code> , <code>description</code> , <code>triggerEvent</code> , <code>steps</code> [{actionType, config, order}], <code>isActive</code> , <code>automationLogs</code> [], <code>createdAt</code> , <code>updatedAt</code>

10.5 Payment & Billing Collections

invoices	<code>_id</code> , <code>projectId</code> (ref projects), <code>clientId</code> (ref users), <code>invoiceNumber</code> (unique), <code>lineItems</code> [{description, quantity, unitPrice, amount}], <code>subtotal</code> , <code>taxAmount</code> , <code>taxRate</code> , <code>discountAmount</code> , <code>totalAmount</code> , <code>status</code> (DRAFT UNPAID PARTIAL LY_PAID PAID OVERDUE CANCELLED REFUNDED), <code>dueDate</code> , <code>issuedAt</code> , <code>paidAt</code> , <code>paymentMethod</code> , <code>transactionIds</code> [], <code>notificationsSent</code> [], <code>pdfUrl</code> , <code>metadata</code> {}, <code>createdAt</code> , <code>updatedAt</code>
transactions	<code>_id</code> , <code>invoiceId</code> (ref invoices), <code>clientId</code> (ref users), <code>amount</code> , <code>paymentGateway</code> (razorpay stripe), <code>gatewayRefId</code> , <code>paymentMethod</code> (card netbanking upi wallet), <code>status</code> (SUCCESS PENDING_VERIFICATION FAILED REFUNDED RETRY_PENDING), <code>gatewayResponse</code> {}, <code>attemptNumber</code> , <code>failureReason</code> , <code>retryScheduledAt</code> , <code>metadata</code> {}, <code>createdAt</code>

refunds	<code>_id</code> , <code>transactionId</code> (ref transactions), <code>invoiceId</code> (ref invoices), <code>amount</code> , <code>reason</code> , <code>status</code> (INITIATED PROCESSING COMPLETED FAILED), <code>gatewayRefundId</code> , <code>processedBy</code> (ref adminProfiles), <code>processedAt</code> , <code>createdAt</code>
----------------	--

10.6 Support & Communication Collections

notifications	<code>_id</code> , <code>userId</code> (ref users), <code>type</code> (PROJECT_UPDATE PAYMENT_DUE REVISION_READY TICKET_RESPONSE ANNOUNCEMENT), <code>title</code> , <code>message</code> , <code>link</code> , <code>isRead</code> , <code>readAt</code> , <code>sendMethod</code> (IN_APP EMAIL SMS WHATSAPP), <code>metadata</code> {}, <code>createdAt</code> , <code>expiresAt</code>

10.7 Content & Portfolio Collections

blogPosts	<code>_id</code> , <code>authorId</code> (ref users), <code>title</code> , <code>slug</code> (unique), <code>content</code> , <code>excerpt</code> , <code>featuredImage</code> , <code>category</code> , <code>tags</code> [], <code>seoMeta</code> { <code>title</code> , <code>description</code> , <code>keywords</code> , <code>canonical</code> , <code>schemaType</code> }, <code>status</code> (DRAFT PUBLISHED ARCHIVED), <code>publishedAt</code> , <code>views</code> , <code>comments</code> [], <code>relatedPosts</code> [], <code>metadata</code> {}, <code>createdAt</code> , <code>updatedAt</code>
portfolioProjects	<code>_id</code> , <code>title</code> , <code>slug</code> (unique), <code>description</code> , <code>categoryTags</code> [], <code>screenshots</code> [{ <code>url</code> , <code>caption</code> , <code>order</code> }], <code>liveUrl</code> , <code>caseStudyUrl</code> , <code>techStack</code> [], <code>results</code> { <code>metrics</code> : [], <code>testimonials</code> : []}, <code>isFeatured</code> , <code>displayOrder</code> , <code>createdAt</code> , <code>updatedAt</code>
testimonials	<code>_id</code> , <code>clientName</code> , <code>company</code> , <code>jobTitle</code> , <code>avatarUrl</code> , <code>rating</code> (1-5), <code>reviewText</code> , <code>source</code> (GOOGLE MANUAL EMAIL SOCIAL), <code>serviceId</code> (ref services), <code>isPublished</code> , <code>publishedAt</code> , <code>metadata</code> {}, <code>createdAt</code>
careerPages	<code>_id</code> , <code>title</code> , <code>slug</code> , <code>content</code> , <code>jobOpenings</code> [{ <code>id</code> , <code>title</code> , <code>department</code> , <code>location</code> , <code>description</code> , <code>requirements</code> , <code>salaryRange</code> , <code>applicationDeadline</code> }], <code>benefits</code> [], <code>cultureMission</code> , <code>videoUrl</code> , <code>metadata</code> {}, <code>publishedAt</code> , <code>createdAt</code> , <code>updatedAt</code>
applicants	<code>_id</code> , <code>jobOpeningId</code> (ref careerPages), <code>name</code> , <code>email</code> , <code>phone</code> , <code>resumeUrl</code> , <code>coverLetter</code> , <code>appliedPosition</code> , <code>status</code> (APPLIED SCREENING INTERVIEW OFFER REJECTED HIRED), <code>appliedAt</code> , <code>interviews</code> [{ <code>date</code> , <code>type</code> , <code>interviewerId</code> , <code>feedback</code> , <code>rating</code> }], <code>createdAt</code> , <code>updatedAt</code>

10.8 Content Governance Collections

mediaAssets	_id, name, type (IMAGE VIDEO DOCUMENT MOCKUP), category (SERVICE TESTIMONIAL BLOG PORTFOLIO TRUST_BADGE CASE_STUDY DASHBOARD), url, s3Key, fileSize, mimeType, dimensions {width, height}, uploadedBy (ref adminProfiles), usageCount, isPublished, metadata {alt, tags, license}, createdAt, updatedAt
seoPages	_id, pageType (LOCATION_LANDING SERVICE_PAGE BLOG PORTFOLIO), slug, title, metaDescription, keywords [], canonicalUrl, robots {index, follow}, ogMeta {title, description, image, type}, schemaMarkup {type, structured}, internalLinks [{targetPage, anchorText}], status (DRAFT PUBLISHED), publishedAt, createdAt, updatedAt

10.9 Logging & Monitoring Collections

activityLogs	_id, userId (ref users), action, entityType, entityId, changes {before, after}, ipAddress, userAgent, timestamp
automationLogs	_id, workflowId (ref workflows), triggerId, entityType, entityId, steps [{step, status, executedAt, result}], overallStatus (SUCCESS FAILED PARTIAL), errorMessage, timestamp
settings	_id, key (unique), value, type, category (GENERAL PAYMENT EMAIL SEO AUTOMATION), isPublic, createdAt, updatedAt

PART XI

API Architecture

REST Specifications & Frontend Connection

11. API Architecture & REST Specifications

11.1 Frontend-to-Backend Connection Architecture

TanStack Query v5

All data fetching. Manages caching, background refetch, optimistic updates, and mutation states. Provides loading/error/success UI states automatically.

Axios Interceptors

Request interceptor: injects Authorization: Bearer from Zustand store. Response interceptor: catches 401 Unauthorized → calls /auth/refresh with HttpOnly cookie → receives new accessToken → replays original failed request invisibly to the user.

Socket.io Client

Connects to wss://api.unityconsult.com for real-time events: lead-status-change, new-notification, project-update. Admin dashboard subscribes on mount.

API Gateway (Redis)

Rate limiting before NestJS: 100 req/min per IP for public routes, 500 req/min for authenticated routes. Returns 429 Too Many Requests with Retry-After header.

Error Handling

Global error boundary in React. Axios interceptor maps HTTP status codes to user-friendly toast notifications via Sonner/Toaster library.

11.2 REST API Specifications

Authentication Domain — /api/v1/auth

Method + Path	Auth	Payload / Params	Action & Response
POST /register	Public	{email, password, name, phone}	Hash password (Bcrypt cost 12), create User+Profile, send OTP email, return 201
POST /login	Public	{email, password}	Validate credentials, issue JWT (15min) + HttpOnly refresh cookie (7d), return {accessToken, user}
POST /refresh	Cookie	HttpOnly refresh cookie	Validate refresh token, issue new accessToken, rotate refresh token
POST /logout	Bearer	—	Blacklist refresh token in Redis, clear cookie
POST /verify-email	Public	{email, otp}	Verify OTP, set is_verified=true

POST /forgot-password	Public	{email}	Send reset OTP email
POST /reset-password	Public	{email, otp, new_password}	Validate OTP, hash new password, invalidate all refresh tokens

Catalog & Booking — /api/v1/catalog

Method + Path	Auth	Payload / Params	Action & Response
GET /services	Public	?category=&limit;=&page;=	Return cached (Redis, 10min TTL) list of published services with tier summary
GET /services/:slug	Public	—	Full service detail with pricing tiers and dynamic form JSON schema
POST /checkout/intent	Bearer	{service_id, tier_id, payment_mode, form_answers}	Validate input, create DRAFT Invoice, call Razorpay orders API, return {razorpay_order_id, amount}
POST /webhooks/razorpay	Public (signature verified)	Razorpay payload	Verify HMAC-SHA256 signature, update Invoice→PAID, Project→ACTIVE, trigger email+WhatsApp events

Client Portal — /api/v1/client

Method + Path	Auth	Payload / Params	Action & Response
GET /dashboard	Bearer (CLIENT)	—	Return aggregated dashboard: active projects, pending tasks, payment summary, unread notifications
GET /projects	Bearer (CLIENT)	?status=	All projects for authenticated client with milestones
GET /projects/:id	Bearer (CLIENT)	—	Full project detail, milestones, notes, deliverables, assigned manager
POST /projects/:id/approve-milestone	Bearer (CLIENT)	{milestone_id}	Mark milestone approved, trigger next-stage notification to admin
POST /projects/:id/revision	Bearer (CLIENT)	{milestone_id, note, attachment?}	Create revision request, notify assigned manager, log in ProjectNotes
POST /upload-url	Bearer (CLIENT)	{file_name, mime_type, project_id, category}	Generate object-storage pre-signed PUT URL (valid 15 min). Client uploads directly to storage.
GET /invoices	Bearer (CLIENT)	—	All invoices for client with status and download URL

POST /invoices/:id/pay	Bearer (CLIENT)	—	Create Razorpay order for outstanding balance, return order ID for frontend checkout
GET /tickets	Bearer (CLIENT)	?status=	All support tickets for client
POST /tickets	Bearer (CLIENT)	{title, category, priority, description, attachment?}	Create support ticket, notify assigned support executive

Admin Operations — /api/v1/admin

Method + Path	Auth	Payload / Params	Action & Response
GET /dashboard	RBAC: any admin	—	Live aggregated metrics: revenue today, leads, conversion rate, active projects, support stats
GET /leads	RBAC: SUPER_ADMIN CRM_EXEC	?status=&assigned;_to=&page;=	Paginated lead pipeline with full details
PATCH /leads/:id/status	RBAC: CRM_EXEC	{new_status}	Update lead status, log interaction, emit Socket.io event to all admin sessions
POST /leads/:id/convert	RBAC: SUPER_ADMIN CRM_EXEC	{service_id, tier_id, amount}	Convert lead to Project + Invoice (UNPAID), notify client via email
GET /orders	RBAC: any admin	?status=&manager;=&service;=&page;=	All projects with client and payment summary
PATCH /orders/:id/stage	RBAC: OPS_MANAGER	{new_stage, milestone_id?}	Update project stage, send client portal notification
POST /orders/:id/upload-deliverable	RBAC: any admin	{file_key, description}	Link uploaded S3 file as deliverable, notify client
GET /analytics	RBAC: SUPER_ADMIN OPS_MANAGER	?from=&to;=	Heavy MongoDB aggregation (cached in Redis 5min): revenue by service, conversion funnel, lead sources
GET /finance/report	RBAC: SUPER_ADMIN FINANCE_MANAGER	?month=&year;=	Full financial report: invoices, transactions, outstanding AR, GST breakdown
POST /services	RBAC: SUPER_ADMIN	Full service object (multipart form)	Create new service with pricing tiers and dynamic form schema
PUT /services/:id	RBAC: SUPER_ADMIN	Partial service update	Update service, bust Redis cache for /catalog/services

PART XII

Event-Driven Automation

& Workflow Rules

12. Event-Driven Automation & Workflow Rules

12.1 Automation Architecture

The backend uses NestJS EventEmitter2 pattern. Every major business action emits a named event. Listener services handle side effects asynchronously — ensuring the primary response is fast while background tasks (email, WhatsApp, CRM update) run without blocking.

Event: `lead.created`

- Client receives welcome email with service information
- Assigned CRM executive receives WhatsApp alert + portal notification
- SLA timer starts (2-hour NEW → CONTACTED target)

Event: `lead.sla_breached`

- Lead card border turns RED on admin Kanban
- Manager receives WhatsApp alert: "Lead [name] has been in NEW for 2+ hours"
- Escalation flag set on lead record

Event: `payment.captured`

- Invoice status updated: DRAFT → PAID
- Project status updated: PENDING_PAYMENT → ACTIVE
- Document Hub module unlocked for client
- Client receives PDF invoice via email
- Client receives WhatsApp: "Payment confirmed — your project is now active"
- Admin dashboard transaction notification emitted via Socket.io
- CRM lead auto-converted to WON status

Event: `document.uploaded`

- Client portal shows upload success toast
- Assigned manager receives email: "Client [name] uploaded [filename]"
- Admin portal shows real-time notification

Event: `milestone.approved`

- Next milestone activated
- Next invoice generated (if milestone billing)
- Manager receives notification: "Client approved milestone [name]"

Event: `project.completed`

- File upload locked on Document Hub
- Final invoice generated for outstanding balance
- Client receives project completion email
- Google Review request email sent 24 hours later
- Project archived after 7 days

Event: ticket.created

- Ticket assigned to available support executive
- Support executive receives notification
- SLA timer starts based on priority
- Client receives ticket ID confirmation email

Event: ticket.sla_breached

- Ticket escalated to Operations Manager
- Red priority flag added to ticket
- Manager receives WhatsApp alert

12.2 Workflow State Map

Explicit workflow statuses for every entity in the system ensure clear SLAs and automations.

Lead Lifecycle

- NEW: Just entered from contact form or inquiry
- CONTACTED: Admin called/emailed/messaged the lead
- CONSULTATION_SCHEDULED: Meeting booked with lead
- QUOTED: Proposal/quotation sent to lead
- NEGOTIATING: Lead discussing pricing/terms
- WON: Lead accepted and booked (converted to Project)
- LOST: Lead declined or no follow-up response after 30 days
- ARCHIVED: Old lead, deleted from active pipeline

Booking Lifecycle

- INQUIRY: Form submitted, waiting for form completion
- QUOTE_SENT: Quotation/proposal delivered to client
- QUOTE_ACCEPTED: Client confirmed willingness to proceed
- ADVANCE_PAID: 40% advance payment received
- IN_PROGRESS: All documents received, work started
- UNDER_REVIEW: Deliverables ready for client approval
- REVISION_REQUESTED: Client requested changes
- REVISION_PENDING: Changes being addressed by team
- COMPLETED: All revisions done, deliverables approved
- ARCHIVED: Project closed, past 90 days
- CANCELLED: Client cancelled, cancellation fee applied

Project Milestones

- PENDING: Milestone not yet active
- ACTIVE: Milestone work in progress
- UNDER_REVIEW: Deliverables ready for approval
- REVISION_REQUESTED: Client requested changes
- COMPLETED: Milestone approved and delivered

- ARCHIVED: Old milestone

Support Tickets

- OPEN: Newly created, unassigned
- IN_PROGRESS: Assigned to executive, being worked on
- RESOLVED: Solution provided, awaiting client confirmation
- CLOSED: Client confirmed resolution
- REOPENED: Client indicated issue persists

Invoices

- DRAFT: Created but not sent to client
- UNPAID: Sent to client, payment pending
- PARTIALLY_PAID: Advance received, balance pending
- PAID: Full amount received
- OVERDUE: Payment due date passed, payment still pending
- REFUNDED: Refund initiated or completed
- CANCELLED: Invoice nullified

12.3 Additional Automation Rules

Critical automation rules for revenue management and client retention.

Overdue Payment Reminder

- Trigger: invoice.due_date - 3 days (first reminder)
- Action: client receives email + WhatsApp reminder
- Trigger: invoice.due_date (second reminder)
- Action: client receives email + WhatsApp + portal badge
- Trigger: invoice.due_date + 7 days (escalation)
- Action: admin receives notification, "AR Aging" report updated

Lead Follow-up SLA

- Trigger: lead.created, set timer for 2 hours
- At 2 hours: if status still NEW, card border RED + manager alert
- At 24 hours: if still NEW, auto-escalate to supervisor
- At 7 days: if no status change, auto-archive with "Lost" flag

Revision Pending Reminder

- Trigger: revision.requested
- Action: assigned team member receives email + platform notification
- Trigger: revision due date - 1 day
- Action: reminder notification sent
- Trigger: revision overdue by 2 days
- Action: escalate to project manager, client receives status update

Project Completion Follow-up

- Trigger: project.completed
- Action 1: send final invoice (if balance due)
- Action 2: send Google Review request email (24h later)
- Action 3: send testimonial request (if enterprise client)
- Action 4: add to "Case Study Candidates" if permission granted

Review Request Workflow

- Trigger: milestone.under_review
- Action: client receives portal notification + email: "Ready for approval"
- After 48h: if no response, admin sends WhatsApp reminder
- Auto-timeout: if no response after 7 days, milestone auto-closes (escalation)

Renewal & Upsell Nudges

- Trigger: every 90 days after project.completed
- Action: send email: "[Service] retainer pricing available"
- Trigger: if client completed SEO project, send Ads campaign offer
- Trigger: if client completed website, send CRM upsell offer
- Frequency: max 2 emails per quarter (prevent spam)
- Opt-out: client can disable upsell emails in portal preferences

12.4 Notification Delivery Matrix

Event	Client Email	Client WhatsApp	Client Portal	Admin Portal	Admin WhatsApp
New Inquiry	✓ Welcome	✓	—	✓ Ping	✓ Alert
Payment Captured	✓ Invoice PDF	✓ Confirmation	✓ Dashboard update	✓ Transaction log	✓
Document Uploaded	—	—	✓ Success toast	✓ Notification	✓ Email
Milestone Approved	—	—	✓	✓	—
Project Completed	✓ Completion	✓	✓	✓	—
Support Reply	✓	—	✓	✓	—
SLA Breached	—	—	—	✓ Red flag	✓ Escalation
Invoice Due	✓ Reminder	✓ Reminder	✓ Badge	✓ AR flag	—
Revision Pending	—	—	✓	✓	✓
Upsell Offer	✓	—	✓	—	—

PART XIII

Content, SEO & Media Strategy

Organic Visibility Architecture

13. Content, SEO & Media Strategy

13.1 Technical SEO Architecture

Rendering Strategy

Homepage + service pages: SSG with ISR (revalidate: 3600s). Blog posts: SSG regenerated on publish.
Client/Admin portal: CSR (no indexing).

Core Web Vitals Targets

LCP < 2.5s | FID / INP < 100ms | CLS < 0.1. Achieved via: image optimization (next/image WebP), lazy loading, code splitting, CDN edge caching.

Schema Markup (JSON-LD)

LocalBusiness on homepage. Service on all service pages. BreadcrumbList on all interior pages. Article on blog posts. FAQPage on service FAQ sections. Product on pricing tiers.

Metadata Management

Dynamic meta title + description generated server-side per page. OG:image generated via dynamic image API (per service/post). Canonical URLs enforced on all pages.

Sitemap & Robots

Dynamic sitemap.xml auto-generated including all service pages, blog posts, portfolio projects, and location pages. robots.txt blocks /api/, /admin/, /app/.

Internal Linking

Every service page links to 2-3 related services. Blog posts link to relevant service pages. Portfolio items link to corresponding service pages.

URL Structure

/services/[service-slug] — clean, keyword-rich, no parameters. /blog/[category]/[post-slug].
/location/[city]/[service-slug] for local pages.

Image Optimization

All images served as WebP via next/image. Descriptive alt text on every image (service name + context).
Structured filenames: website-development-hyderabad.webp.

13.2 Local SEO Strategy

Unity Consult must dominate local search in target cities for all service categories.

- Google Business Profile fully optimized: services, photos, posts, Q&A;
- Embedded Google Maps on homepage and contact page
- Location-specific landing pages for each city × service combination
- City name + service keyword in H1, meta title, and page copy
- Review schema embedded from Google Business API (or manual import)
- "Near me" keyword integration in hero and FAQ sections

- LocalBusiness JSON-LD with lat/lng, opening hours, and service area
- NAP consistency (Name, Address, Phone) across all pages and listings

13.3 Keyword Strategy

Category	Primary Keywords	Long-Tail Targets
Web Dev	website development, web design	"professional website development in [city]", "e-commerce website for small business"
SEO	SEO services, SEO company	"local SEO services for restaurants", "SEO agency Hyderabad affordable"
Legal	GST registration, company registration	"GST registration online fast", "private limited company registration consultant"
Marketing	digital marketing, Google Ads	"Google Ads agency small business", "meta ads for local business"
Branding	logo design, brand identity	"professional logo design for startup", "brand identity package affordable"
CRM	CRM development, custom CRM	"custom CRM software for service business", "CRM for small business India"

13.4 Blog Taxonomy & Content Strategy

- **Business Setup:** How to register a business, GST guide, Pvt Ltd vs LLP, compliance checklist
- **Digital Marketing:** Google Ads tutorials, Meta Ads guides, remarketing strategies
- **SEO Guides:** Local SEO, technical SEO, keyword research, Core Web Vitals
- **Web Development:** Tech stack guides, e-commerce setup, website cost breakdowns
- **Branding & Design:** Logo design tips, brand identity, color psychology
- **Case Studies:** Client success stories with measurable results + service CTA
- **Business Growth:** CRM benefits, automation, lead generation strategies

Publishing cadence: minimum 2 posts per week. Each post must include: related service CTA, internal links (2–3 to service pages), OG image, FAQ schema, and email capture at end of article.

13.5 Canonical URL & Duplicate Management

Explicit canonical URL management prevents duplicate content penalties.

- Homepage: self-referential (<https://unityconsult.com/>)
- Service pages: self-referential per URL (e.g., </services/website-development> → self)
- Blog posts: self-referential unless content syndicated (then canonical points to original)
- Location pages: unique canonical per location (e.g., </location/mumbai/website-dev> → self)
- Tracking parameter handling: ?utm_* parameters stripped, canonical to clean URL
- Parameter handling: for </services?category=web-dev> redirect to </services/web-dev> (no ?)
- Duplicate prevention: any deprecated URL 301-redirects to canonical version

13.6 Robots & Sitemap Automation

Dynamic Robots.txt

- Block all crawlers from: </api/>, </admin/>, </app/>, </private/>, </temp/>
- Allow crawl delay for image-heavy pages: Crawl-Delay: 2
- Point to sitemap: Sitemap: <https://unityconsult.com/sitemap.xml>

Auto-Generated Sitemap.xml

- Index-level sitemap lists: services, blog, portfolio, location pages
- Service sitemap: all service pages with lastmod on publish/update
- Blog sitemap: all published posts, lastmod on publish date
- Location sitemap: all city × service combinations, lastmod annually
- Images sitemap: product images per service + portfolio screenshots
- Monthly regeneration or on-demand after content publish

Search Console Integration

- Sitemap auto-submitted to Google Search Console
- Monitor: Coverage issues, excluded pages, duplicate content warnings
- Mobile usability warnings tracked and fixed immediately
- Manual requests: re-crawl new content within 24h of publish

13.7 Structured Data (Schema) Implementation

LocalBusiness Schema (Homepage)

- name: "Unity Consult"
- image: logo SVG
- url: https://unityconsult.com
- address: {street, city, state, postalCode, country}
- telephone, email
- openingHours: Mon-Fri 10am-7pm, Sat 10am-5pm
- sameAs: [social media URLs]
- areaServed: [list of cities]
- priceRange: \$\$

Service Schema (Service Pages)

- name, description
- brand: "Unity Consult"
- offers: {price, priceCurrency (INR), availability}
- aggregateRating: {ratingValue, reviewCount} (from testimonials)
- image: service hero image

BreadcrumbList Schema (All Pages)

- itemListElement: [{name, item, position}]
- Home > Services > Service Name > (if nested)
- Helps with search breadcrumb display

Article Schema (Blog Posts)

- headline, author, datePublished, dateModified
- image, description (excerpt)
- articleBody (optional but recommended)
- keywords (focus keyword)

FAQPage Schema (Service FAQs)

- mainEntity: [{@type: Question, name, acceptedAnswer: {text}}]
- Shows as FAQ rich snippet in search results

Review/AggregateRating Schema

- On testimonials section: ratingValue (1-5), author name
- Shows star rating in search results for brand SERP

13.8 Internal Linking Strategy

- Service pages: each page links to 2-3 related services (e.g., Website Dev → SEO, CRM)
- Blog posts: every post includes 1-2 links to relevant service pages
- Portfolio: each project links to service it showcases (website projects → Website Dev service)
- Related posts: every blog post shows 3 related articles sidebar
- Breadcrumb links: functional breadcrumbs aid navigation + SEO
- CTAs: "Explore [Related Service]" buttons at bottom of service pages
- Footer links: service categories + blog category links available in footer
- Anchor text: descriptive, keyword-rich (avoid generic "click here")

13.9 Location-Based Landing Pages

Strategy

Generate location landing pages for each city × service combination (e.g., "Website Development in Mumbai"). Boosts local SEO and ad landing page relevance.

URL Structure

/location/[city-name]/[service-slug] (e.g., /location/mumbai/website-development)

Page Components

- H1: "Professional [Service] in [City] | Affordable Pricing"
- City-specific opening: "Serving businesses in [City] with [service] expertise"
- Embedded Google Maps showing office location
- City-specific testimonials (clients from that city)
- Local service overview + city-specific advantages
- Pricing (same as main service page, localized)
- CTA: "Book [Service] in [City]" button
- LocalBusiness schema with city in areaServed

Implementation

Template-based: 1 template, data-driven by city + service params. Dynamically generated on build for 20+ cities × 6 services = 120+ pages.

13.10 Required Media & Trust Assets

The following assets must be produced before launch:

Asset Type	Specification & Requirement
Platform Mockups	Isometric 3D device mockups of Client Portal on laptop + mobile. Hero section visual.
Service Visuals	Custom 3D renders or isometric vector illustrations per service category (6 total).
Trust Badges	High-res SVGs: Razorpay partner, Visa/MasterCard, Google Verified, SSL seal, AES-256.
Client Logos	Minimum 15 client logos in SVG format for marquee trust strip.
Portfolio Screenshots	Minimum 10 website projects: desktop + mobile mockup frames, before/after.
Team Photos	Professional headshots for About Us page (consistent background + style).
Case Study PDFs	Minimum 3 detailed case studies: problem, approach, results with metrics.
Video Assets	Optional: 30–60 second explainer video for homepage hero or About section.
Google Review Screenshots	Verified 4.8+ star rating screenshot + export of top 10 reviews.
Office/Work Visuals	5–10 photos of office, team at work, client meetings for About page.

PART XIV

SDLC, Analytics & KPIs

Development Roadmap & Success Metrics

14. Software Development Life Cycle (SDLC)

14.1 Agile-Scrum Development Roadmap

Unity Consult is built using 2-week sprint cycles with weekly internal demos. Teams: Frontend (2 devs), Backend (2 devs), Design (1 designer), QA (1 engineer), PM (1 product manager). All code reviewed via GitHub PRs before merge.

Phase	Timeline	Sprint Name	Key Deliverables
Phase 1	Weeks 1–5	Planning & Architecture	Finalize Master PRD. Provision cloud hosting with MongoDB Atlas. Setup NestJS boilerplate, MongoDB schema via Mongoose, Redis cache. Figma high-fidelity prototypes (all pages). Design token system. Brand assets collected.
Phase 2	Weeks 6–7	Sprint 1: Auth & Core Infrastructure	User registration, email OTP, Google SSO, JWT auth flow, refresh token rotation, RBAC setup, admin user seeding.
Phase 3	Weeks 8–9	Sprint 2: Public Website	Next.js homepage all sections, service catalog, service detail pages, portfolio, blog (static), about, contact, footer, CMS-connected content.
Phase 4	Weeks 10–11	Sprint 3: Booking & Payments	Dynamic booking forms, Razorpay integration, webhook processing, auto invoice generation, payment confirmation emails, CRM lead creation.
Phase 5	Weeks 12–13	Sprint 4: Client Portal	Dashboard, project tracking, milestone approval, document upload (S3), invoice list, pay-balance flow, support tickets, notification system.
Phase 6	Weeks 14–15	Sprint 5: Admin CRM	Kanban pipeline, analytics dashboard, order management, service management CRUD, CMS editor, blog management, finance module, RBAC admin panel.
Phase 7	Week 16	Sprint 6: Integration & Automation	Event-driven automation rules, WhatsApp integration, SLA monitoring, Socket.io real-time events, Google Analytics 4, Datadog setup.
Phase 8	Weeks 17–18	Testing & Security	End-to-end integration testing (React Query ↔ NestJS). Pen testing for XSS, SQLi, CSRF. Load testing (k6). Accessibility audit (axe-core). Lighthouse performance audit (target > 90).

Phase 9	Week 19+	Deployment & Launch	Zero-downtime deployment via edge hosting + managed Kubernetes. DNS cutover. Sentry error tracking live. Datadog APM monitoring. Post-launch monitoring for 2 weeks before full sign-off.
---------	----------	---------------------	--

15. Analytics & Key Performance Indicators

15.1 Growth & Conversion KPIs

KPI	Target	Measurement Tool	Cadence
Visitor-to-Lead Conversion Rate	> 4.5%	GA4 + CRM	Weekly
Lead-to-Booking Rate	> 20%	CRM Pipeline	Weekly
Cart Abandonment Rate	< 35%	GA4 Events	Weekly
Advance vs Full Pay Split	60/40 advance/full	Finance Module	Monthly
Organic Traffic Growth (MoM)	> 15%	Google Search Console	Monthly
Blog-to-Lead Conversion	> 1.5%	GA4 Events	Monthly
Returning Visitor Rate	> 25%	GA4	Monthly
Page Load Speed (LCP)	< 2.5s	Hosting analytics	Weekly
Core Web Vitals Score	> 90 (all pages)	Lighthouse CI	Per deploy

15.2 Operational KPIs

KPI	Target	Source
Time-to-First-Contact (Lead NEW → CONTACTED)	< 30 minutes	CRM SLA timer
Avg Project Delivery Time	Within quoted timeline ± 10%	Projects module
Milestone On-Time Completion Rate	> 85%	Projects module
Support First Response Time (HIGH priority)	< 4 hours	Ticket system
Support Resolution Rate (within SLA)	> 90%	Ticket system
Client Portal Adoption Rate	> 80% of clients log in	GA4 + Auth logs
Outstanding Accounts Receivable (AR > 30 days)	< 15% of total revenue	Finance module
Payment Failure Rate (Razorpay)	< 5%	Razorpay dashboard
Invoice-to-Payment Cycle Time	< 3 days	Finance module

15.3 Analytics Tool Stack

Tool	Purpose
------	---------

Google Analytics 4	User behavior, traffic sources, conversion events, funnel analysis
Google Search Console	Keyword rankings, click-through rates, indexing status
Hosting Analytics	Real-time performance, Core Web Vitals per route
Datadog APM	API response times, error rates, infrastructure health
Sentry	Frontend and backend error tracking with stack traces
Razorpay Dashboard	Payment success rates, settlement reconciliation, refunds
CRM Analytics Module	Lead conversion funnel, source attribution, team performance
Hotjar (optional)	Session recordings, heatmaps for UX optimization

15.4 Detailed Analytics Breakdown

Lead Source Attribution

- Organic Search: % of leads, conversion rate by keyword, avg value
- Referrals: % of leads, top referring domains, conversion rate
- Paid Ads (Google/Facebook): cost per lead, ROAS, conversion rate by campaign
- Direct: % of leads, repeat visitor analysis
- Email: open rate, click-through rate, conversion rate
- Organic Social: platform breakdown, content performance

Service-Wise Conversion Metrics

- Per service: visitor → lead → booking conversion rate
- Service A may have 3% conversion, Service B 5.5% (identify high-performer)
- Tier performance: Standard vs Premium vs Enterprise popularity and conversion
- Add-on attach rate: % of clients purchasing add-ons

Customer Lifetime Value (CLV)

- Average project value per service
- Repeat purchase rate: % of clients who book 2+ times
- Churn rate: % of one-time vs recurring clients
- Upsell/cross-sell revenue: additional revenue from related services
- Gross profit per client segment

Support SLA Metrics

- First response time: avg across all priorities
- Resolution time: avg time to close ticket
- SLA compliance rate: % of tickets resolved within target
- Escalation rate: % of tickets escalated to senior staff
- Client satisfaction (CSAT): avg rating post-resolution
- Ticket volume by category: technical, billing, delivery, account, other

Financial Health Metrics

- Monthly Recurring Revenue (MRR): from subscription/retainer services
- Average Order Value (AOV): total revenue / number of bookings
- Revenue per service: track which services are most profitable
- Operating margin: (revenue - COGS) / revenue
- Customer acquisition cost (CAC): marketing spend / new customers
- CAC payback period: months to recover acquisition cost

16. Compliance, Security & Data Protection

16.1 Data Protection & Privacy

Privacy Policy

GDPR/CCPA compliant. Published at /privacy. Consent collection on forms via checkbox.

Consent Management

Email opt-in checkbox at registration. Clients can manage preferences in portal settings.

Data Retention

Client data: retained 5 years after project completion. Deleted on-demand with written request. Support tickets archived after 2 years. Activity logs retained 1 year.

PII Encryption

All Personally Identifiable Information (email, phone, addresses) encrypted at-rest using AES-256.

In-transit: TLS 1.3 minimum.

Data Backups

MongoDB automated snapshots: daily, retained 30 days. Off-site backup to S3 (separate region). RTO: 4 hours, RPO: 1 hour.

Disaster Recovery

Documented failover procedure for database. Test monthly with dry-run restore. DNS failover to standby instance if primary region fails.

16.2 Security Measures

- HTTPS/TLS: all traffic encrypted, HSTS header enabled, no HTTP fallback
- CSRF Protection: double-submit cookie + SameSite=Strict on auth tokens
- XSS Prevention: Content Security Policy headers, HTML escaping in React, input sanitization
- SQL Injection Prevention: parameterized Mongoose queries, no raw string interpolation
- Rate Limiting: 100 requests/minute per IP, 1000 requests/hour per auth user
- CORS: whitelisted origins only, no wildcard accept
- Input Validation: server-side validation on all API endpoints (Zod schemas)
- API Authentication: JWT (15min expiry) + HttpOnly refresh cookie (7 days)

- Admin Panel Security: 2FA required, IP whitelisting optional, session timeout 4 hours
- Vulnerability Scanning: monthly external penetration test, OWASP Top 10 compliance check
- Secrets Management: managed secrets vault (no hardcoded secrets), rotated quarterly
- DDoS Protection: Cloudflare WAF rules, rate limiting, bot protection enabled

16.3 Audit Logging

- All user actions logged: login, logout, data access, modifications, deletions
- Audit fields: timestamp, user ID, action type, resource ID, before/after state (for changes)
- Immutable logs: written to separate append-only collection, cannot be edited
- Retention: 7 years for financial transactions, 3 years for others
- Admin access: audit logs accessible only to Super Admin and Compliance Officer
- Export: logs exportable for compliance audits (tax, legal, regulatory)

16.4 File Scanning & Validation

- File uploads scanned with ClamAV antivirus engine (real-time)
- File type validation: whitelist allowed MIME types per upload context
- File size limits: documents 50MB, images 20MB, videos 500MB
- S3 bucket versioning enabled: preserve previous file versions
- Malware detection: flagged files quarantined, admin notified, client blocked from download

17. Deployment, Rollback & Operational SOPs

17.1 Deployment & Infrastructure

Staging Environment

Staging.unityconsult.com mirrors production, pre-deploy validation happens here

Production Environment

<https://unityconsult.com> (global CDN), <https://api.unityconsult.com> (managed Kubernetes)

Zero-Downtime Deployment

Blue-green deployment: new version deployed alongside old, DNS switch when ready. Max downtime: 0 seconds.

CI/CD Pipeline

GitHub Actions: lint → test → build Docker image → push to ECR → deploy to EKS (rolling update)

Rollback Procedure

If errors detected post-deploy: `kubectl rollout undo deployment/[service]` restores previous version in <30s

Database Migrations

Mongoose schema migrations versioned, tested in staging first, backward-compatible (add-only changes)

Secrets Management

Managed secrets vault stores all API keys, database URLs, Razorpay keys. Rotated quarterly.

Monitoring & Alerts

Datadog APM tracks API latency, error rate, dependency health. Slack alerts for errors > 1%

Uptime SLA

Target 99.95% uptime (max 2.2 hours downtime/month). Monitored by UptimeRobot (3rd party health checks)

17.2 Post-Launch Monitoring & Response

Error Monitoring

Sentry captures all frontend/backend errors. Severity-based alerting: Critical → immediate Slack + SMS, Warning → daily digest

Performance Monitoring

Hosting analytics track Core Web Vitals per route. Lighthouse CI runs on every deploy (target > 90).

Incident Response

P1 (Site Down): oncall engineer paged immediately, 15min response time. P2 (Major Functionality Broken): 1hr response. P3 (Minor Issue): next business day.

Escalation Chain

L1 (Junior Dev) → L2 (Senior Dev) → L3 (Architect). Each level has 30min to resolve, escalate if unable.

Post-Incident Review

Every P1/P2 incident triggers post-mortem: root cause, prevention measures, owner assignment

18. Client Operational SOPs

18.1 Client Onboarding SOP

Day 1

- Client books service and makes payment
- Automated: PDF invoice emailed, portal account created, "Welcome" email sent
- Assigned team member sends WhatsApp: "Your project is confirmed. Let's connect to understand your needs."
- Manager schedules kickoff call (optional for quick services, mandatory for complex)

Day 2-3

- Kickoff call with client to discuss requirements, scope, timeline
- Intake form/brief created in project portal
- Necessary documents requested via portal (if not uploaded during booking)
- Preliminary work plan shared with client for approval

Day 4-5

- Documents reviewed, client approval obtained
- Project added to internal delivery schedule
- Team kickoff meeting conducted (internal)
- Project status updated to "IN_PROGRESS"

18.2 Delivery Handover SOP

Ready for Review

- Deliverables prepared, internal QA signed off, milestone marked "UNDER_REVIEW"

Client Notification

- Email + WhatsApp sent: "Your deliverables are ready for review. Login to portal to approve or request changes."

Review Period

- Client has 3 business days to review (SLA: response within 48h), request revisions, or approve

Revision Request

- If client requests revisions, noted in revision tracker, team works on changes, re-submits within 2 days

Approval

- Client approves milestone. System automatically sends completion notification to team and finance.

Invoice Generation

- If milestone-based billing, next invoice automatically generated and sent to client

Delivery Confirmation

- Completion email sent: "Your milestone is complete. Find deliverables in portal downloads."

18.3 Revision & Change Management

Revision Limit

Standard plan: 1 revision included. Premium: 2 revisions. Enterprise: unlimited revisions in scope.

Revision Request

Client submits revision request via portal with specific feedback. Logged with timestamp.

Revision Work

Team pulls revision request, completes changes, re-submits (target: 2 business days)

Out-of-Scope Changes

If revision requires significant additional work beyond original scope, escalate to manager for quote

Re-submission

Updated deliverables re-submitted for approval (same 3-day review period applies)

Tracking

Revision history maintained in project for audit trail

18.4 Dispute & Issue Resolution SOP

Scope Dispute

Client claims deliverable doesn't match scope. Manager reviews original scope doc + booking form. If justified, offer free revision. If not, escalate to owner for decision.

Quality Issue

Client reports quality problems (errors, incomplete work). Team investigates, takes ownership, fixes immediately (no revision count burn)

Timeline Delay

Project overdue, client escalates. Manager provides revised completion date + explanation. If > 7 days overdue, offer 10% discount on outstanding balance.

Payment Dispute

Client disputes charge. Verify: booking terms, services rendered, proof of delivery. If legitimate, process refund. If not, escalate to owner.

Escalation

Unresolved dispute after 5 days → escalate to Operations Manager → Owner. Owner decision is final.

Documentation

All disputes logged with resolution in project notes for future reference

18.5 Cancellation & Refund SOP

Client Request

Client requests cancellation via portal or support ticket.

Reason Capture

Support team documents reason for analytics/improvement insights.

Cancellation Policy

0-7 days: 100% refund of advance. 8-14 days: 75% refund (25% cancellation fee). 15+ days: 50% refund (50% fee).

Project Status

Project marked "CANCELLED". Work halted immediately.

Refund Processing

Finance team initiates Razorpay refund (5-7 business days for bank transfer).

Confirmation

Client receives refund confirmation email with transaction details.

Exit Survey

Optional: send brief survey to understand why client cancelled (feedback for improvement).

18.6 Project Closure SOP

All Deliverables Complete

All milestones marked COMPLETED, final invoice paid

Satisfaction Survey

Automated email sent: "How was your experience with Unity Consult?" (1-5 rating)

Google Review Request

Email with direct link to leave Google Business Profile review (sent 24h after completion)

Case Study Offer

If enterprise client and approval granted: "Can we feature your project as a case study?"

Upsell Opportunity

Relevant follow-up service offer (e.g., post-website launch, offer SEO package)

Archive Project

Project moved to archive after 90 days, searchable but read-only

Ongoing Support

If service includes post-delivery support, maintain support channel (tickets, email, WhatsApp)
